
The user input 13 prototype patches for "sky," "grass," and "building," (outlined with black squares) and the system determined which other patches in the database were similar by using the model (or combination of models) which best explained the user's labeling. Patches which received a label from the system have a color bar under them (58 in these images). Red is "sky" (EV), blue is "grass" (HIST-D), and yellow is "building" (HIST-D, MRSAR).

Picard and Minka (1995)
